

UMORFIL® N6U® has won the Gold Medal Award of CONCOURS LÉPINE 2021.

Release Date : 2021/11/29

Stand as a pioneer of innovative material supplier, UMORFIL® Technology team that led by Mr. Erh-Jen Hou (The CEO of Camangi Corp.) has been very honored to participate in CONCOURS LÉPINE 2021. There are three items in the UMORFIL® bionic series, the bionic viscose UMORFIL® Beauty fiber® was launched in 2012 and won the silver medal in 2015, bionic

Polyester UMORFIL® T was launched in 2015 and won the silver medal in 2017, and the bionic nylon UMORFIL® N6U® was launched in 2017 and won the gold medal this time!

We can tell the trend from the world's most historic international invention exhibition CONCOURS LÉPINE this year that the winning-award products are those complying with "circular economy" and "zero waste" topics and technologies. UMORFIL® technology has reached the spirit of circular economy that transform the waste into a higher value textile material by using supramolecular technology to integrate collagen peptide amino acid which upcycled from food waste – aquaculture fish scale and create the "UMORFIL® N6U®- Eco Friendly Bionic Nylon" which is a new type of nylon that has better hand-feeling with deep dyeable feature, higher moisture regain, natural cooling effect and anti-UV function, provide us a skin-friendly and better protection textile material.

Through our innovation journey for these years, UMORFIL® team continues cooperating with the textile supply chain partners in the world and has successfully let more global brands announce UMORFIL® collections worldwide like denim, active wear, innerwear, home textile, wadding, and shoes products. UMORFIL® team will focus on making efforts with textile industry and academia to support circular economy spirit as well as sustainable value.
